To whom it may concern,

I ask that you thoroughly ASSESS, REGULATE AND HAVE LABELLED ALL FIDDLED FOOD ie GE/GM or any other name.

Our bodies have, over thousands of years, adjusted to the food as it was. Truly unknowing people lately have fiddled that food by adding and taking out bits and pieces. The earlier changes were small and slow and so probably little effect BUT that has changed lately and all sorts of changes happening. EVERY ONE OF THOSE CHANGES needs careful scrutenising with extensive testing to be sure we can handle them AND NOT JUST A ONE OFF TINY TEST. There is far too much CANCER around already!!

You must extensively test ALL CHANGES - I.E. ALL CHANGES OF A G.M. NATURE. You are actually risking the viability of the plants if they cannot reproduce successfully and so future generations to put it quickly SO YOU CANNOT TAKE THE CHANCE - FULL AND EXTENSIVE TESTING OF ALL TYPES IS IMPERATIVE. (This deserves more detail but surely you are smart enough to see check that for yourself!).

I hope I can trust the committee there to be sensible and not just look at dollars - it will cost many if you get it wrong!!

Yours sincerely,
Allan Clancey.
